DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Giallorenzi et al (US006332008B1) hereinafter referred to as G008.

G008 also incorporates by reference the following two US Patents and will be referred to accordingly;

Giallorenzi et al (US005583853A) hereinafter referred to as G853.

Giallorenzi et al (US005499236A) hereinafter referred to as G236.

Regarding claim(s) 1, 4 and 7, G008 discloses a method of synchronizing a secondary station with a primary station, the primary station and the secondary station exchanging CDMA signals via a communication medium (see **G008, abstract, Figs 1, 2 & 3; also see G853 Fig 1**), the method comprising the steps of:

-modulating a data signal with an initial code word in order to obtain an initial CDMA signal and transmitting the initial CDMA signal to the primary station until synchronization with the primary station is obtained (see **G853; claims 1 & 4**),

Art Unit: 2664

- modulating the data signal with a final code word in order to obtain a final CDMA signal and transmitting the final CDMA signal after synchronization with the primary station has been obtained (see **G236, abstract, claim 1**), characterized in that the initial code word is substantially orthogonal to the final **code** word for every possible time shift of the initial code word (see **G008, col 3 L44-48**)

Regarding claim(s) 2, 5 and 8, G008 discloses a method of synchronizing a secondary station with a primary station characterized in that all symbol values of the initial code word are equal to each other (**col 3 L5-20, L44-47**).

Regarding claim(s) 3, 6 and 9, G236 discloses the use of Walsh-Hadamard codes (**claim 17**).
